Nesting boxes thoughtfully designed for their inhabitants!

ENTRANCE HOLE PLATE

The Entrance Hole Plate can be used to protect the entrance hole in a wooden nest box from being enlarged by other birds or animals such as woodpeckers or squirrels. It can also be used to reduce the size of the entrance hole.

FITTING

The square plate has an entrance hole of the diameter selected, and 4 corner fixing holes.

Place the plate over the existing entrance hole, lining the two entrance holes up. Mark the positions of the 4 corner fixing holes with a pencil or similar.

Taking the plate away, using a bradawl or drill make small holes in the nest box for the fixing screws.

Put the plate back on, and using the 4 screws provided, attach it securely.

Your nest box is now protected.
