

The Nestbox Company Limited and the Environment

Environmental Vision

The Nestbox Company Limited will seek to be a positive contributor to the natural and human environments, through adopting policies designed to bring environmentally sound products manufactured in environmentally sensitive ways to market. It will strive to reach these ends through legal, socially responsible, sustainable and ethical business practices and the careful application of technology to all aspects of its business. Through its products, it will seek to encourage others to take an interest in, and themselves contribute to, the natural environment.

The Natural Environment

The Nestbox Company will develop products which are associated with the natural world, and themselves use energy resources responsibly throughout their life. It will adopt a restrained and sustainable approach to the use of all natural resources in the operation of its business.

The Community

The Company seeks to contribute to the built and man made environments and to the community, through ensuring that all its developments and activities are in keeping both in scale and character and form a positive influence on the landscape and its local communities.

Our Products

Our products will all be designed to encourage an interest in wildlife, and where possible contribute directly to aspects of the natural environment. They will deploy technology both to provide functional benefits and to contribute to a reduction in the use of energy and non-renewable resources. We will aim to continuously improve all our products, and seek endorsement from appropriate organisations such as the Forest Stewardship Council.

Our Partners

As far as practicable, we will select and work with like minded customers, suppliers and other partners who also adopt sustainable and responsible environmental practices.
